

MONOPRINTING ONTO FABRIC

Monoprinting is a simple technique to create an effective background colour to your fabric.

Simply place dabs of Idea Fabric colour in the centre area of a sheet of acetate .

Place a second sheet of acetate over the top and blend with your fingers. Separate the acetate sheets and place a piece of fabric over the colour and gently smooth over the fabric with your hand.

Alternatively for varying effects you can draw into the colour before placing the fabric over.

Let dry for 24 hours and then iron to make it colourfast .
