

Adding Dimension to your Textile Art with TYVEK film

TYVEK film is made from fine, high density, non-toxic, spun polyethylene fibres. This product, offers all the best characteristics of paper, film and fabric in one material. With the application of heat, it changes form, shrinking, bubbling and distorting, to give a range of interesting surface textures.

Key Features:

- Incredibly strong
- Unique balance of strength and softness
- Stitchable
- Light weight and durable
- High Opacity
- Good surface stability.
- Can be coloured with felt pens, inks, coloured pencils, shiva oil paintstiks, fabric paints and dyes.
- Can be printed on using a printer or photo copier

HOW TO USE:

Colour your tyvek using any colouring products that will withstand heat. Place the film coloured side up and using a heat gun apply heat to the areas you wish to distort. The heat gun should be held 10cm away from film or scorching will occur. The more you heat tyvek the harder it will become. Your distorted piece can be further decorated with stitching, beading, varnishing, glued onto canvas, paper or wood or sewn onto fabric by machine or hand .
